Hamza Tarakhan

Senior UI/UX Designer · Product Designer · Design Systems

Amman, Jordan · +962 770 706 289 · hamzatarakhan2000@gmail.com · LinkedIn

Summary

Senior UI/UX designer with 4+ years designing enterprise and telecom products. I own the UX and design system of SalesPoint, a dealer platform running across five telecom operators from one shared system. I turn complex business rules (KYC, SIM lifecycle, commission engines, role-based approvals) into interfaces that work under daily high-volume use.

I also build what I design. I have shipped 9 personal apps end to end in React and React Native, and I use AI tools (Claude, Cursor, Figma Make, Lovable) to put near-production prototypes in front of stakeholders before development starts.

Experience

Senior UI/UX Designer — Leading Point Software, Amman

Oct 2022 – Present · Promoted from UI/UX Designer

- Lead UX for enterprise and telecom products used daily by dealers and agents in several markets, from requirements through design, validation and developer handoff.
- Run the design system behind a multi-brand product: a review-and-approve process for new components, plus a token structure covering light/dark mode, Arabic/English (RTL), multiple fonts and multiple brand identities.
- Turn ambiguous business rules into clear flows, including commission engines and multi-stage, role-based approval processes, working directly with Product Owners, Business Analysts and developers.
- Set the standards other designers build against and coordinate design priorities and resourcing across the team.
- Build interactive, near-production prototypes with Claude, Cursor, Figma Make and Lovable, so stakeholders review the real experience before development starts, shortening the path from concept to dev-ready design.

Selected Work

SalesPoint — multi-brand dealer platform (flagship)

One dealer portal and app serving five telecom operators: Ooredoo, Awaser, Beyond, STC and Starlink.

- **Challenge:** operators needed one platform for many brands and markets, without duplicated design or development, handling compliance-heavy, high-volume work (KYC, SIM lifecycle, commission).

- **What I did:** owned end-to-end UX for identity verification, SIM activation (physical and eSIM), billing and payment, termination, ownership transfer and dealer wallet.
- Tested 12 competing UX variants side by side (5 activation flows, 5 credit-limit patterns, 2 migration models), so decisions rested on evidence rather than opinion.
- Built a governed system across 200+ screens with shared selection, OTP/verification and success/failure patterns, full Arabic/English RTL support, and brand-switchable theming.
- Designed a widget-based dashboard each dealer can reorder and toggle for their role, and the commission module's dashboards and plan configuration.
- **Result:** each new operator launched on existing components and patterns instead of a new design, and the product reads as one coherent system across five brands.

Other products at Leading Point

- **ViewPoint** — CRM web portal with role-based enterprise workflows.
- **Omantel Employee App** — internal workforce app covering multiple employee services.
- **Ooredoo Self-Service Kiosk** — tablet kiosk experience for in-store customers.
- **Try Before You Buy** — customer-facing website and purchase journey.

Independent Products

Designed and built end to end with working React / React Native front ends.

- **Shamat** — bilingual Arabic/English app built around a Mushaf (in development).
- **Flowance** — personal finance tracker, built as a complete working product.
- **Activities App** — designed, coded and deployed end to end.
- **Ucan** — gym and workout tracking app.
- **Fit Band** — companion app for a fitness wearable.
- **ConfMang** — conference management portal with organizer and attendee flows.
- Also: Virgin Bakery, Health Care App, Masakr App.

Skills

- **UX & UI:** user research, requirements analysis, user flows, information architecture, wireframing, interaction design, high-fidelity UI, interactive prototyping, UX writing, dashboard and enterprise UX
- **Design systems:** governance and component approval, design tokens, multi-brand theming, light/dark mode, bilingual Arabic/English (RTL), multi-font systems
- **Leadership:** setting team design standards, design priorities and resourcing, cross-functional work with PO, BA and engineering
- **Code:** HTML, CSS, Tailwind CSS, React, React Native, component-based design, end-to-end app deployment
- **AI workflow:** Claude, Cursor, MCP, Figma Make, Lovable, prompt engineering
- **Tools:** Figma, FigJam, Jira, Azure DevOps

Education

B.Sc. Computer Information Systems — The Hashemite University, Zarqa · 2022

Certifications

- UX Design Certification — Nielsen Norman Group (NN/g)
- User Experience Design — Interaction Design Foundation (IxDF)

Languages

Arabic (native) · English (professional working proficiency)
